

⇒ LPG → propane, butane, 5-15 bar, kitchen-gas → liquid → odour
⇒ LNG → methane, ($\sim -160^\circ\text{C}$), powerplants, fertilizers → liquid
⇒ CNG → methane, (200-250 bar)
⇒ PNG → methane, non-toxic but asphyxiant at high concn. → odour
→ LPG shortage $\neq$ PNG shortage

① Different sources

LPG: - (i) Crude oil-refining
(ii) Natural gas processing

PNG: - Natural gas fields

② Storage & distribution: -

⇒ LPG: - stored as liquid under pressure
→ distributed in cylinders

→ supply chain issues: -

→ transport, inventory limits

⇒ PNG: - supplied via continuous pipe-line networks.

→ Always in gaseous state.

① AHAs: - group of plants and animal-derived acids, with one-hydroxyl group at the α -position, used as exfoliators

Serums: - highly concentrated skin care liquid
